A development permit shall not be issued unless the site intended to be used, or upon which a building or structure is to be erected, abuts, or has frontage on a graded all-weather registered road, or unless satisfactory arrangements have been made with Council for the improvement or building of a road, where required.

4.2 Development on Hazard Lands

4.2.1 Where a proposed development of a building is located on land considered by Council to be potentially hazardous, including but not limited to a wetland, water body or watercourse where flooding may occur, Council may require the applicant to submit sufficient topographic information to determine if the development will be within 50 metres of any slopes that may be unstable, or within any river or stream flood plain, or other land that may be subject to flooding.

4.2.2 Council may require that before a permit may be issued, the applicant shall submit a report prepared by a professional competent to assess the suitability of the site for a development described in clause (1), and which in the opinion of council, shows that the proposed site and development is suitable with respect to the following where relevant:

- (1) the potential for flooding up to a 1 in 500 flood elevation, or where not involving any building, such lower elevation as may be suitable for the proposed use.
- (2) the potential for slope instability.

Drainage works shall be constructed at the owner's expense and shall provide for site drainage that does not adversely affect adjacent properties or stability of the land.
- 4.2A.2 Where a proposed development alters site drainage potentially affecting adjacent or downstream properties, the applicant shall be required to submit a design for drainage works incorporating sufficient capacity to accommodate surface water runoff for a 1:100 year flood event with no incremental increase in offsite flows in excess of what would have been generated from the property prior to the development.
- 4.2A.3 Where a storm retention pond is proposed to manage surface water runoff and the retention pond does not have a defined offsite outlet or relies primarily on evaporation to recharge the pond's holding capacity, the pond shall be designed to accommodate an additional 25% of storage capacity above the 1:100 year storage requirement.
