Helpful tips to save water and money!

If all the earth's water is represented by a 4L jug, only about 30 mL – less than 1% – would be the easily accessible freshwater required to support all human needs including industry, agriculture, drinking and washing.

A low-flow showerhead saves as much as 10 L of water per minute.

Keep a jug of water in the fridge. This eliminates the need to run the tap until it's cold, saving 7-12 L of water per minute.

Run the dishwasher and washing machine only when they're fully loaded. Each unnecessary load wastes 70-190 L of water.

Your tap uses 7-12 L of water per minute while it runs, so turn off while shaving and brushing your teeth.

Try taking shorter showers. This can save between 6-19 L of water per minute.

A new, water-efficient toilet can save as much as 14 L of water per flush compared to an older model. This can save up to 70 L of water per person, per day.

Save 6-30 L of water per flush by only flushing when necessary and avoid using the toilet as a wastebasket.

Regularly check your faucets, pipes and toilets for leaks. If found, have the leaks fixed as soon as possible to avoid further waste.

We wish to thank our friends, family and the Aberdeen community for the cards, phone calls and expressions of sympathy on the passing of our mother, Billie Thompson. Thank you to the hall committee for organizing the lunch and to all who donated food. Your support during this difficult time was truly appreciated.
